

(HGR-01)

## ATTACHMENT AND DEPLOYMENT OF THE BLANKET HANGER STRAP

The "Hanger" (Fig 1) is designed to allow for the deployment of the opened Tactical Blanket™ from above. It is recommended that the Hanger be used in conjunction with an Aluminum Extension Pole Set (available separately) so as to maintain rigidity.

The Hanger is provided in sets of three. When deploying a full eight panel blanket, use all three Hangers. Attach a Hanger at the top of panel #1, panel #5, and panel #8. When using less than eight panels, spread Hangers evenly across the panels. Attach the Hangers in the following manner:

Pull apart the Velcro® fastener strip at the top of the panel (Fig 2). Note that the Hanger has Velcro® hook on one side and loop on the other. Match up the hook and loop on the Hanger with the hook and loop on the carrier (Fig 3). Sandwich the Hanger in the carrier top seam and press closed (Fig 4). Repeat for remaining panels.

For rigidity, insert the Aluminum Extension Pole into the loops provided on the face of the carrier.

Attach ropes through the grommets on the Hangers and the Tactical Blanket™ is ready to be deployed (Fig 5).

To remove the Hangers, simply reverse the process.

Be certain, after removing the Hangers, that the Velcro® seam securing the ballistic panels in the carrier pockets are fully closed.

If you have any questions, please don't hesitate to call us directly at 805/526-3046.
